Excel doesn't have a default function that displays numbers as English words in a worksheet, but you can add this capability by pasting the following SpellNumber function code into a VBA (Visual Basic for Applications) module. This function lets you convert dollar and cent amounts to words with a formula, so 22.50 would read as Twenty-Two Dollars and Fifty Cents. This can be very useful if you're using Excel as a template to print checks.

If you want to convert numeric values to text format without displaying them as words, use the [TEXT function](#) instead.
